Citation is down today due to radar being down.

ER-2 will fly a land surface mission (in coordination with MAPIR) and calibration mission, possibly diverting to weather in the OK/TX panhandle.

The mission will be:

1. Fly the land surface points over OK
2. Fly the calibration points over the Gulf of Mexico (Gerry Heymsfield provided those points)
3. Fly the land surface points over OK
4. RTB

We may contact the ER-2 during task 2 or task 3 to divert to weather in western OK/TX via Iridium.
